

# RADARK

*KELA's Real-time Darknet Threat Intelligence Console*

## WHY KELA?

KELA Targeted Cyber Intelligence offers a wide range of advanced proprietary technologies, providing unique intelligence on threats targeting corporate enterprises worldwide. KELA is comprised of more than 100 intelligence and technical experts all leveraging unique skills from Israel's elite military intelligence units and speaking a total of more than 20 languages. The combination of intelligence backgrounds and professionalism in the cyber world, enables KELA's team to develop high-end technologies and analyze complex data from an intelligence-point-of-view.

**RADARK, KELA's Radar of the Darknet**, monitors the Darknet to identify specific threats targeting clients. The key to gathering the most effective intelligence is to think like the attackers and understand the hacker's methodologies. RADARK was designed to automatically emulate the hacker's gathering process, monitor a curated set of Darknet sources, and provide fully targeted and actionable intelligence.

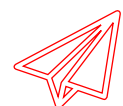

## WHAT IS RADARK?

## HOW DOES IT WORK?

Following configuration of key assets (email addresses, domain names, BIN numbers, IP addresses, etc.), RADARK runs 24/7 to monitor them. To accomplish this, RADARK uses a combination of advanced filtering algorithms, along with hundreds of Darknet information sources, constantly maintained and refreshed by KELA's cyber analyst team. Throughout this process, RADARK automatically crawls popular forums, markets, and sites, where threat actors are active in order to gather all relevant intelligence on the client's key assets.

RADARK's Darknet monitoring detects and alerts large enterprises worldwide on any targeted threat against clients. KELA's Darknet expertise enables clients to receive 100% targeted and actionable intelligence targeting any of their assets, and essentially prevent any potential cyber-attacks before they happen.

## WHAT DO YOU GET?
