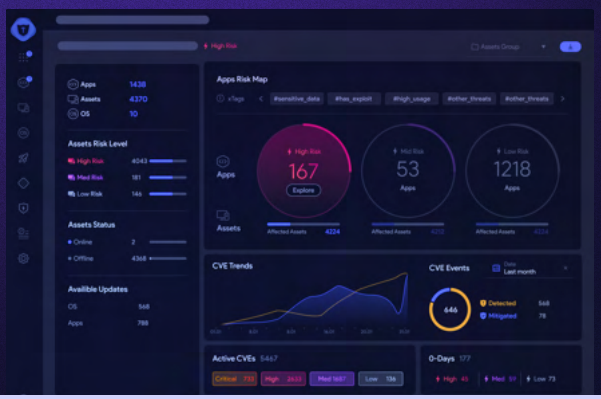
vicarius



Vicarius' Mission

“ To provide customers with solutions to proactively reduce risk wherever computer software resides ”

Team Background

- Mamram & Intelligence units graduates with distinguished service
- Operational and tech experience with over 10 startups

Michael Assraf
CEO/Co-founder

Yossi Ze'evi
CTO/Co-founder

Roi Cohen
CRO/Co-founder

Orna Mintz-Dov
Active Chairman of the Board

TOPIA is a cloud-based platform to assess, prioritize, and remediate vulnerabilities in applications, assets, and operating systems

Vulnerability Assessment

Patch Management

Risk Reduction

Competitive Advantages

Patchless Protection

In-memory protection for software binaries and libraries

Hands-off Deployment

Cloud-first architecture, no local hardware needed

Data Prioritization

Proprietary MapReduce engine to collect, format, and analyze execution attributes

Software Binary Tracking

Proprietary database for publicly available software binaries and libraries

Blindspot Detection

Agent deployment is used to scan for unmanaged devices

Use Cases

CSPM

Track and maintain cloud environments

- Gain visibility across multiple cloud vendors and for any Linux variety
- Activate independent remediation disconnected from the cloud vendor

SISENSE

WFH

Efficiently remediate risk across WFH assets

- Easily scan and remove assets with no VPN connection or internal link
- Deploy one agent rather than multiple

COLLAHUASI

AVR

Consolidate remediation efforts across many environments

- Overcome errors with manual work
- Gain better understanding of risk across multiple process steps

AB InBev

Customer Profile

Direct approach for mid-sized account - CISO or IT/ Security admin

Bottom-up approach for bigger accounts - security analyst or team member

Why Topia?

01 **Unified Platform That Replaces 2-3 Others**

02 **Next-Gen Solution with Advanced Capabilities**

03 **Coherent and Competitive Pricing Model**

04 **SaaS-based, Easy to Integrate and Use**

05 **5 Minute Setup and Deployment**
